

Welcome to Lawrence Rehabilitation Hospital, a premier rehab facility located in the heart of Mercer County.

Lawrence Rehabilitation Hospital is an established rehabilitation hospital that offers a wide range of acute and subacute rehabilitation services and programs. Offering physical, occupational and speech therapy services on both an inpatient and outpatient basis.

Our focus is on providing the care that will help our patients return home and get back to the life they know and love.

Each and every patient is unique in their needs and their stage in the rehabilitation journey, and we ensure that the care we provide reflects that.

Greater Independence, Improved Quality of Life

We boast more than five decades of specialization in the most effective approaches to physical rehabilitation.

With experience that's second to none, we're committed to the health journey of each patient through treatments such as physical and occupational therapy, speech therapy, therapeutic recreation, and social and psychological services.

Acute Rehab

We have 60 beds in the acute rehab department, with a unique and tailor-made care plan for every patient. More intensive than subacute care, our goal is to get you home, healthy and fast.

Subacute Rehab

With 56 beds and experienced staff, our subacute rehab department is well equipped to deal with patients whose conditions can't withstand the longer, more rigorous therapy sessions of acute care.

Our rehabilitation programs are physiatry led and directed for **BETTER PATIENT OUTCOMES.**

Specialized Care for Every Patient

Optimizing Your Independence

A comprehensive, multidisciplinary team of professionals with training, experience, and proven outcomes for management of:

- Stroke recovery
- Amputation
- Orthopedic conditions
- Neurological rehabilitation
- Parkinson's disease
- Wound Care
- Brain injury
- Spinal cord injury
- Cardiac surgery
- Diabetic conditions
- Multiple sclerosis

Our expert staff includes physiatrists, attending physicians, clinicians, therapists, and dietician – so we are well-equipped to serve patients with a wide variety of diagnoses.

We offer a team approach to rehabilitation, leveraging the expertise of our professionals to provide our patients with maximum independence and positive outcomes.

Our care extends well past basic physical rehabilitation, with goals being determined by each patient's specific level of injury with an emphasis on restoring the patient to a level of independent functionality, with the ultimate goal being to perform activities of daily life.

This may include nutrition, dressing and personal hygiene, improved mobility, better communication, problem solving, a return to leisure activities, and returning to his or her prior function in the community, in school, or at work.
